The Bridge Program offers day treatment for individuals in the process of recovery following acquired brain injury. Treatment provides a structured setting for renegotiating independence and community living skills following a life-changing neurological incident. It is designed to "bridge" the gap between hospitalization and the multiple services and agencies available within the community. The program combines group and individual therapies under the guidance of a professional staff, with group therapy the primary way clients work on their life-management skills. The Bridge Program offers a fully individualized approach to treatment, built around the client's unique needs and rate of improvement.
