Tygart Valley Rehabilitation and Fitness is committed to your total wellness. Their physical therapy clinics have knowledgeable and friendly staff to serve you. The staff frequently treat patients with orthopedic or neurological injuries, post-operative patients, sports injuries, and geriatric and pediatric patients. They also work with individuals who experience common issues such as joint pain, neck pain, and back pain or need compression stockings for edema management. They offer several treatment options for patients with various diagnoses, including manual therapy, soft tissue mobilization/massage, therapeutic exercise, electrical stimulation, ultrasound, lymphedema therapy, and many other modalities. A skilled therapist can evaluate you and will work with you to develop a program that will meet your specific needs and return you to a function.

The outpatient Physical Therapists also work with inpatients during their stays in the hospital. They work to counteract the deficits of endurance, ambulation tolerance, and safety that frequently occur while patients have a hospital stay. They see hospital inpatients 7 days a week, except for holidays, to ensure that the patients receive the best care possible while they are recovering at Grafton City Hospital.
