

## **Chronic Kidney Disease**

Healthy kidneys are critical for overall health and can be related to other conditions such as diabetes. Take steps to prevent kidney disease and reduce your risk for kidney failure by minimizing the risk for CKD, making lifestyle changes, taking prescribed medications, and seeing your primary care physician on a regular basis.

## **The Dental / Kidney Disease Connection**

Good dental care is important for everyone, but especially for people with kidney disease. What might be a minor infection for a healthy person could be a major problem for someone with kidney disease.
